

Remove battery

This article covers how to remove the battery from the Hydrofoiler XE- 1.

ID	Tools Required	Tasks
	M4 Hex Key	Unscrewing battery grub screws (2)

1. Using a 4 mm hex key undo the 2 grub screws that are securing the battery in the battery tray.

IMPORTANT - Take care to not fully screw the grub screws out of the battery tray. Screwing these out fully means that you will need to re-screw starting from inside the battery tray and screwing them outwards. Doing it from the outside-in can cause threading of the battery tray screw holes.

2. Once loosened, lift the battery out of the tray and disconnect from the Hydrofoiler connector cable.
